

Monitoring isn't "luxury". It's the minimum for safer anaesthesia.

The risk isn't only dramatic surgery.
The risk occurs as well in routine anaesthesia

-  Oxygen changes first. You won't see it with your eyes.
-  Blood pressure falls silently.
-  Recovery is often the most vulnerable moment.

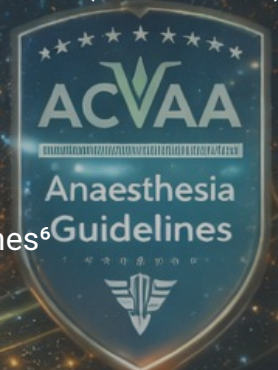

Even experienced clinicians cannot measure oxygen or blood pressure by observation alone.

Evidence from clinical practice

- 20–40% of dogs develop intra-anaesthetic hypotension¹
- Hypoxaemia frequently detected during recovery²
- Most complications occur peri- or post-operatively³
- Guidelines recommend continuous monitoring⁴
- Anaesthesia-related mortality remains higher in animals than in humans⁵
- Early detection of physiologic changes significantly improves intervention outcomes⁶

Aligned with international monitoring guidelines (AVA, ACVAA, ...)

Our purpose is to create **medical Awareness for all**
Alive beings beside us (mAAbbu) - by producing
unique outstanding products & solutions which fulfill
market needs with the outcome of a better world.

Our ZERO-regret Promise:

30-days
Money back if
not convinced

2y warranty

- 30-day real case test with money back if not convinced
- If needed – replacement shipment within 24-48h
- 2y base warranty (+ optional 1y extension*)
- Future proof concept (software add-ons planned**)
- Developed with Veterinarians
- Designed to integrate into everyday workflow, not to complicate it.

Low initial cost per case: only **€ 5.-**

ROI = >43x Patients

With just 20–25 cases per month, the MC-1 pays for itself within 11 months, based on the purchase price.
If costs passed to Pet Owner:
Ø charge with 43 cases × EUR 35 = EUR 1,505

No infrastructure required
