

Vital monitoring capacity determines patient flow.

In modern veterinary hospitals, anaesthesia monitoring extends beyond the operating room

During transitions

- OR monitors remain occupied during recovery
- Transfers interrupt monitoring continuity
- Overflow patients reduce monitoring consistency
- Peak days create temporary monitoring gaps
- Time pressure increases the risk of incomplete reconnection

During peak workload

- Peak days increase monitoring demand
- Installed systems are occupied
- Emergency add-ons require immediate availability
- System reassignment delays reduce operational efficiency

The MC-1 introduces mobile, full-performance monitoring into the entire anaesthesia pathway.

- ✓ From induction to recovery – continuous monitoring
- ✓ No disconnection.
- ✓ No reassignment.
- ✓ No infrastructure change
- ✓ Activation within seconds
- ✓ Immediately available
- ✓ Plug & Play
- ✓ No installation. No IT integration
- ✓ Not a replacement – a structural extension

Infrastructure-independent monitoring capacity

Designed for institutional reliability and scalable clinical environments.

€ 35.- Typical monitoring fee charged to the pet owner**

€ >7000.- Potential annual monitoring revenue with MC-1 (10%)**

€ 5.- Cost per case until break-even,
 – without additional charge to the pet owner

43x Return on investment / 43 patients
 (~ €35 per case)*

Investment Logic

- Increase monitoring availability without fixed system expansion
- Avoid capital investment in additional room-based infrastructure
- No installation projects or structural modification required
- Preserve capital for core clinical equipment
- Scale monitoring capacity in line with procedural growth
- Full mobile system (“stays with the patient”)

Risk Control & Implementation

- No integration project required
- No installation downtime
- No IT system dependency
- No device training necessary****
- Immediately deployable when additional capacity is needed
- 30-day real case test with money back if not convinced

Institutional Trust & Reliability

Operational security. Regulatory clarity. Long-term reliability.

- CE-marked with full medical device certification
- mAAbbu GmbH (Austria) – Certified medical device manufacturer
- Developed and supported in Europe
- Structured EU service network
- Replacement shipment within 24–48 hours
- 2y warranty (+ optional 1y extension possible**)
- Future proof concept (software add-ons planned***)
